Mukesh Tiwari

Education

2016–2020 **PhD, Computer Science**, *Australian National University*, Canberra, Australia

2004–2009 **Integrated Post Graduate**, *Indian Institute of Information Technology & Management*, Gwalior, India

PhD thesis

Title *Formally Verified Verifiable Electronic Voting Scheme*

Supervisor Dirk Pattinson

Description We focussed on three main challenges posed by electronic voting: correctness, privacy, and verifiability. We addressed correctness by using a theorem prover to implement a vote-counting algorithm, privacy by using homomorphic encryption, and verifiability by generating a independently checkable scrutiny sheet. Our work had been formalised in the Coq theorem prover.

Employment

2021- **Senior Research Fellow**, *University of Cambridge*, Cambridge, United Kingdom

I am working on formalising network protocols framework in the Coq theorem prover. The goal is to develop a mathematical proven correct framework so that a protocol designer can assess the properties of their protocols using my framework

2020-21 **Research Fellow**, *University of Melbourne*, Melbourne, Australia

I worked with Toby Murray on *Security Concurrent Separation Logic*. The aim was to mathematically reason about memory safety and information flow property of concurrent programs written in C.

2018–2020 **Tutor**, *Australian National University*, Canberra, Australia

I was a tutor for first year logic course. My role was to help students understand the concepts, clearing their doubts, and assisting them in homework.

2013–2015 **Lecturer**, *International Institute of Information Technology*, Bhubaneswar, India

This role was primarily teaching-focussed, and the courses I taught were *C programming, Java Programming, Compiler Design* and *Cryptography*. In addition, every year I supervised two master's students in their final year project.

2012–2013 **Haskell Developer**, *Parallel Scientific*, Colorado, USA

In this role, my primary job was research and prototype high performance software programs, mainly linear algebra algorithms written in Haskell.

2009–2012 **Technical Assistant**, *Government of India*, Kolkata, India

I worked as a developer for automating the day-to-day job, including enforcing the security policies of the organisation.

mukeshtiwari

2008–2008 **Summer Intern**, *Arcelor-Mittal, Research & Development Technological Centre*, Avilés, Spain

I worked on formalising many business requirements into a linear programming problem and wrote a custom interface that interacted with Arcelor-Mittal's in-house linear programming solver.

Skills

Coding Coq, Haskell, OCaml, Lean, Python, C

Language Hindi, English

Awards

HDR Fee Remission Merit Scholarship

ANU PhD Scholarship (International)

Full Scholarship to attend DeepSpec Summer School 2018, Princeton University

Travel Scholarship to attend Marktoberdorf Summer School 2019

Work in Progress

[1] Verified Secure Declassification for Concurrent Applications. In this work, we develop a formal model of leaking sensitive data (joint work with Toby Murray, Gidon Ernst, and David Naumann. In this work, I formally verified the case studies, location-server and aution-server, in SecureC). (submitted).

[2] Formally Verified Verifiable Group Generators. In this work, we develop a formally verified algorithm that can be used to bootstrap a democratic election (sole author). (submitted). `https://github.com/mukeshtiwari/Formally_Verified_Verifiable_Group_Generator`.

[3] Modelling Networking Protocols Mathematically. In this work, we develop a formally verified framework that a network protocol designer can use to verify the properties of their protocols (joint work Timothy Griffin. In this work, I formally verified generalised graph algorithm on semiring algebra in the Coq theorem prover). (ongoing work). `https://github.com/mukeshtiwari/semiring_graph_algorithm`.

[4] Machine Checking the Bayer-Groth Proof of Shuffle. In this work, we formalise the Bayer-Groth Proof of Shuffle, used in many democratic elections including Switzerland to shuffle the ballot (joint work with Thomas Haines and Rajeev Gore. In this work, I proved facts related to Vandermonde matrix in the Coq theorem prover). (major revision USENIX 2023. We have addressed all the issues highlighted by the reviewers and shepherd is happy but acceptance is not official yet).

[5] Theorem Provers to Protect Democracies. In this work, we are formalising all the cryptographic components written in Java of SwissPost in Coq theorem prover. Our goal is to replace the SwissPost Java implementations (`https://bit.ly/3EODmnF`) with mathematically proven correct Coq implementations to write an independent verifier for the scrutiny sheet of elections conducted by Swiss Post software programs (sole author) (work in progress). `https://github.com/mukeshtiwari/Dlog-zkp/`.

[6] Towards Leakage-Resistant Machine Learning in Trusted Execution Environments. In this work, submitted informally in PaveTrust, we develop a formally verified information flow secure (constant-time) gradient descent algorithm with axiomatic differential privacy (sole author) (work in progress). `https://github.com/mukeshtiwari/IFMachine/tree/main/secc/examples/federated_learning`.

[7] Machine Checked Properties of the Schulze Method. In this work, we are formally verifying all the (social choice) properties of the Schulze method. (lead developer) (work in progress). `https://github.com/mukeshtiwari/Schulzeproperties`.
