

## Education

- 2016–2020 **PhD, Computer Science**, *Australian National University*, Canberra, Australia  
2004–2009 **Integrated Postgraduate**, *Indian Institute of Information Technology & Management*, Gwalior, India

## PhD thesis

- Title *Formally Verified Verifiable Electronic Voting Scheme*  
Supervisor Dirk Pattinson  
Description We focussed on three main challenges posed by electronic voting: correctness, privacy, and verifiability. We addressed correctness by using a theorem prover to implement a vote-counting algorithm, privacy by using homomorphic encryption, and verifiability by generating a independently checkable scrutiny sheet. Our work had been formalised in the Coq theorem prover.

## Employment

- 2023- **Senior Research Associate**, *University of Oxford*, Oxford, United Kingdom  
I am working on connecting symbolic models of cryptographic protocols and their verified implementations using session types. The goal is to obtain a mathematically proven correct distributed implementation that mimics the real-world situation.
- 2021–2023 **Senior Research Associate**, *University of Cambridge*, Cambridge, United Kingdom  
I worked on formalising a networking-protocol framework based on semiring algebraic structure in the Coq theorem prover. The goal was to develop a mathematical proven correct framework so that a protocol designer could assess the properties of their protocols using my framework.
- 2020–21 **Research Associate**, *University of Melbourne*, Melbourne, Australia  
I worked with Toby Murray on *Security Concurrent Separation Logic*. The aim was to mathematically reason about memory safety and information flow property of concurrent programs written in C.
- 2018–20 **Tutor**, *Australian National University*, Canberra, Australia  
I was a tutor for a first year logic course and Haskell programming course. My role was to help students understand the concepts, clearing their doubts, and assisting them in homework.
- 2013–2015 **Lecturer**, *International Institute of Information Technology*, Bhubaneswar, India  
This role was primarily teaching focussed, and the courses I taught were *C programming*, *Java Programming*, *Web Technologies*, *Compiler Design*, and *Cryptography*. In addition, every year I supervised two master's students in their final year project.
- 2012–2013 **Haskell Developer**, *Parallel Scientific*, Colorado, USA  
In this role, my primary job was research and prototype high performance software programs, mainly linear algebra algorithms written in Haskell.

🐙 [mukeshtiwari](https://mukeshtiwari)

- 2009–2012 **Technical Assistant**, *Government of India*, Kolkata, India  
I worked as a developer for automating the day-to-day job, including enforcing the security policies of the organisation.
- 2008–2008 **Summer Intern**, *Arcelor-Mittal, Research & Development Technological Centre*, Avilés, Spain  
I worked on formalising many business requirements into a linear programming problem and wrote a custom interface that interacted with Arcelor-Mittal's in-house linear programming solver.
