The Hiring Committee,
University of Adelaide,
Adelaide

Application for the post of Lecturer in Software Engineering - School of Computer Science)

Dear Hiring Committee,

I have extensive experience of software engineering (security) research, in particular election software security, cryptography, theorem proving (logic), and social choice theory. In addition, I am willing to expand my research horizons in other research areas, e.g., explainable AI using logic, etc. I also have 3 years of teaching and administration experience at an Indian university, International Institute of Information Technology, Bhubanesware, Odisha, India. My research has already published in top-tier conferences and I find the University of Adelaide a perfect place for me to continue my research.

Diversity and inclusion matters a lot to me because of my own background (born in a remote Indian village with no school). I believe everyone is capable of achieving everything, all they need is support.

Your Sincerly,

Mukesh Tiwari
