Achievement

Mukesh Tiwari

I have been awarded many scholarships during my education. For example, I have been awarded the international PhD scholarship and fees remission by the Australian National University. In addition, DeepSpec summer school and Marktoberdorf summer school awarded me a full scholarship based on my work in interactive theorem proving (unfortunately, I could not attend the Marktoberdorf summer school because of the visa issue). I listing these scholarships as an achievements because without these scholarships I could not have been able to afford my PhD, or meet new researchers due to my background (I come from a remote Indian village without access to a proper school). Moreover, I am an avid programming and math problems solver which led to me win many programming competitions. During my university, I was the amongst the top 10 problem solver of Project Euler[1].
